Installation: Deployment Manager can be installed in the usual way that you might install any .NET software. The installation files are included as a part of the zip archive or it can be downloaded from the Internet using the right-click menu in

windows explorer. Licensing: The setup utility allows you to create an activation key that will unlock full functionality. It will activate all files that you have installed if you choose not to accept the terms of the license agreement. You may create as many keys as you need to unlock the software for your users. You can give each key to each user or just one to a whole team of users. This is not a User license. Any user can use the functionality even if you do not give them the activation key. The key has to be stored in your source code or on your own server. A single key may be used on

the same computer by multiple users.
