So this would be my third keyboard. Not bad for my first few years of using computers I have only one that is still working and from september to september this keyboard is my primary creative instrument. The is my go to keyboard for quickly creating new tracks and I have used it with Digital Minimix a few years ago and also pretty sure it was with M-Audio. I own a lot of microkorgs keyboards. I have some action keyboards, sun and logitech but thats for other occasions the drum and

bass on this is something I could write a book about :) but Im more of a jazz keyboard user. The A-one track is quite analogue like a newton. I find it slower then the A Xrite for me but it does not exhibit the lag like the scan pcs I have used in the past. But you can definitely feel the difference when it comes to using the keyboard. I have used it on all three apple systems and its... read more At first this keyboard had a lot of problems, when I got it in 2000 as it was damaged in the box, it only had a broken key on the modulation wheel. I had to disassemble it to repair it. After fixing the keyboard I decided to make it more DIY, adding midi cable and a front panel of all the keys I need for my albums, it has the keyboard in it and is best described as a plug and play keyboard. The keyboard is still functioning now. This is a very nice, useful, and easy to navigate keyboard. My wife was using a keyboard that needed a new battery, and she took it

to the local music shop that I bought my first keyboard, and they asked if I was familiar with the keyboard, and I told them this one is different, as I was always trying to find a keyboard that was easy to navigate. Well they told me this was a lot like the velodyne in novation. They said it was easy to navigate and very sturdy. I brought it back the next day and they made sure it worked ok, and it did. For me I love the large, easy to read, and know what I am looking at screen of the keyboard, while I can't find the feature I am looking for on a laptop, a Keyboard is where it's at! No need for voice commands, just get up and do it, and if there is ever an issue, you can access the key panel and see the issues right away. You cannot send a message. Be the first to post a review

controversy once again. First, former Texas A&M quarterback Johnny Manziel did not intend to be drafted by his favorite team, the Cleveland Browns. However, because he hurt his arm while throwing golf balls in the weeks leading up to his decision to leave A&M, he opted not to throw at the Cleveland Browns' private workout. Because teams need to meet with Manziel, his former coach at A&M, Manziel changed his mind about attending the pick-up football game because his representatives at the NFL draft confirmed he would be drafted by the Buffalo Bills. On the night of the draft, Manziel picked the Bills over the Detroit Lions. He then said he had chosen the Bills because it meant he would not have to switch teams from Cleveland. "I'm not going to lie," he told ESPN's Tom Pelissero. "Going to the wrong city was a little bit of a factor. 5ec8ef588b
